

aquarius™ prime film coating systems

ready-to-use immediate release coating systems

key features and benefits

- easily dispersed in water
- can be matched to customers' existing HPMC film coating system
- available in clear and white base formulations
- excellent tablet aesthetics and appearance coating processes

description

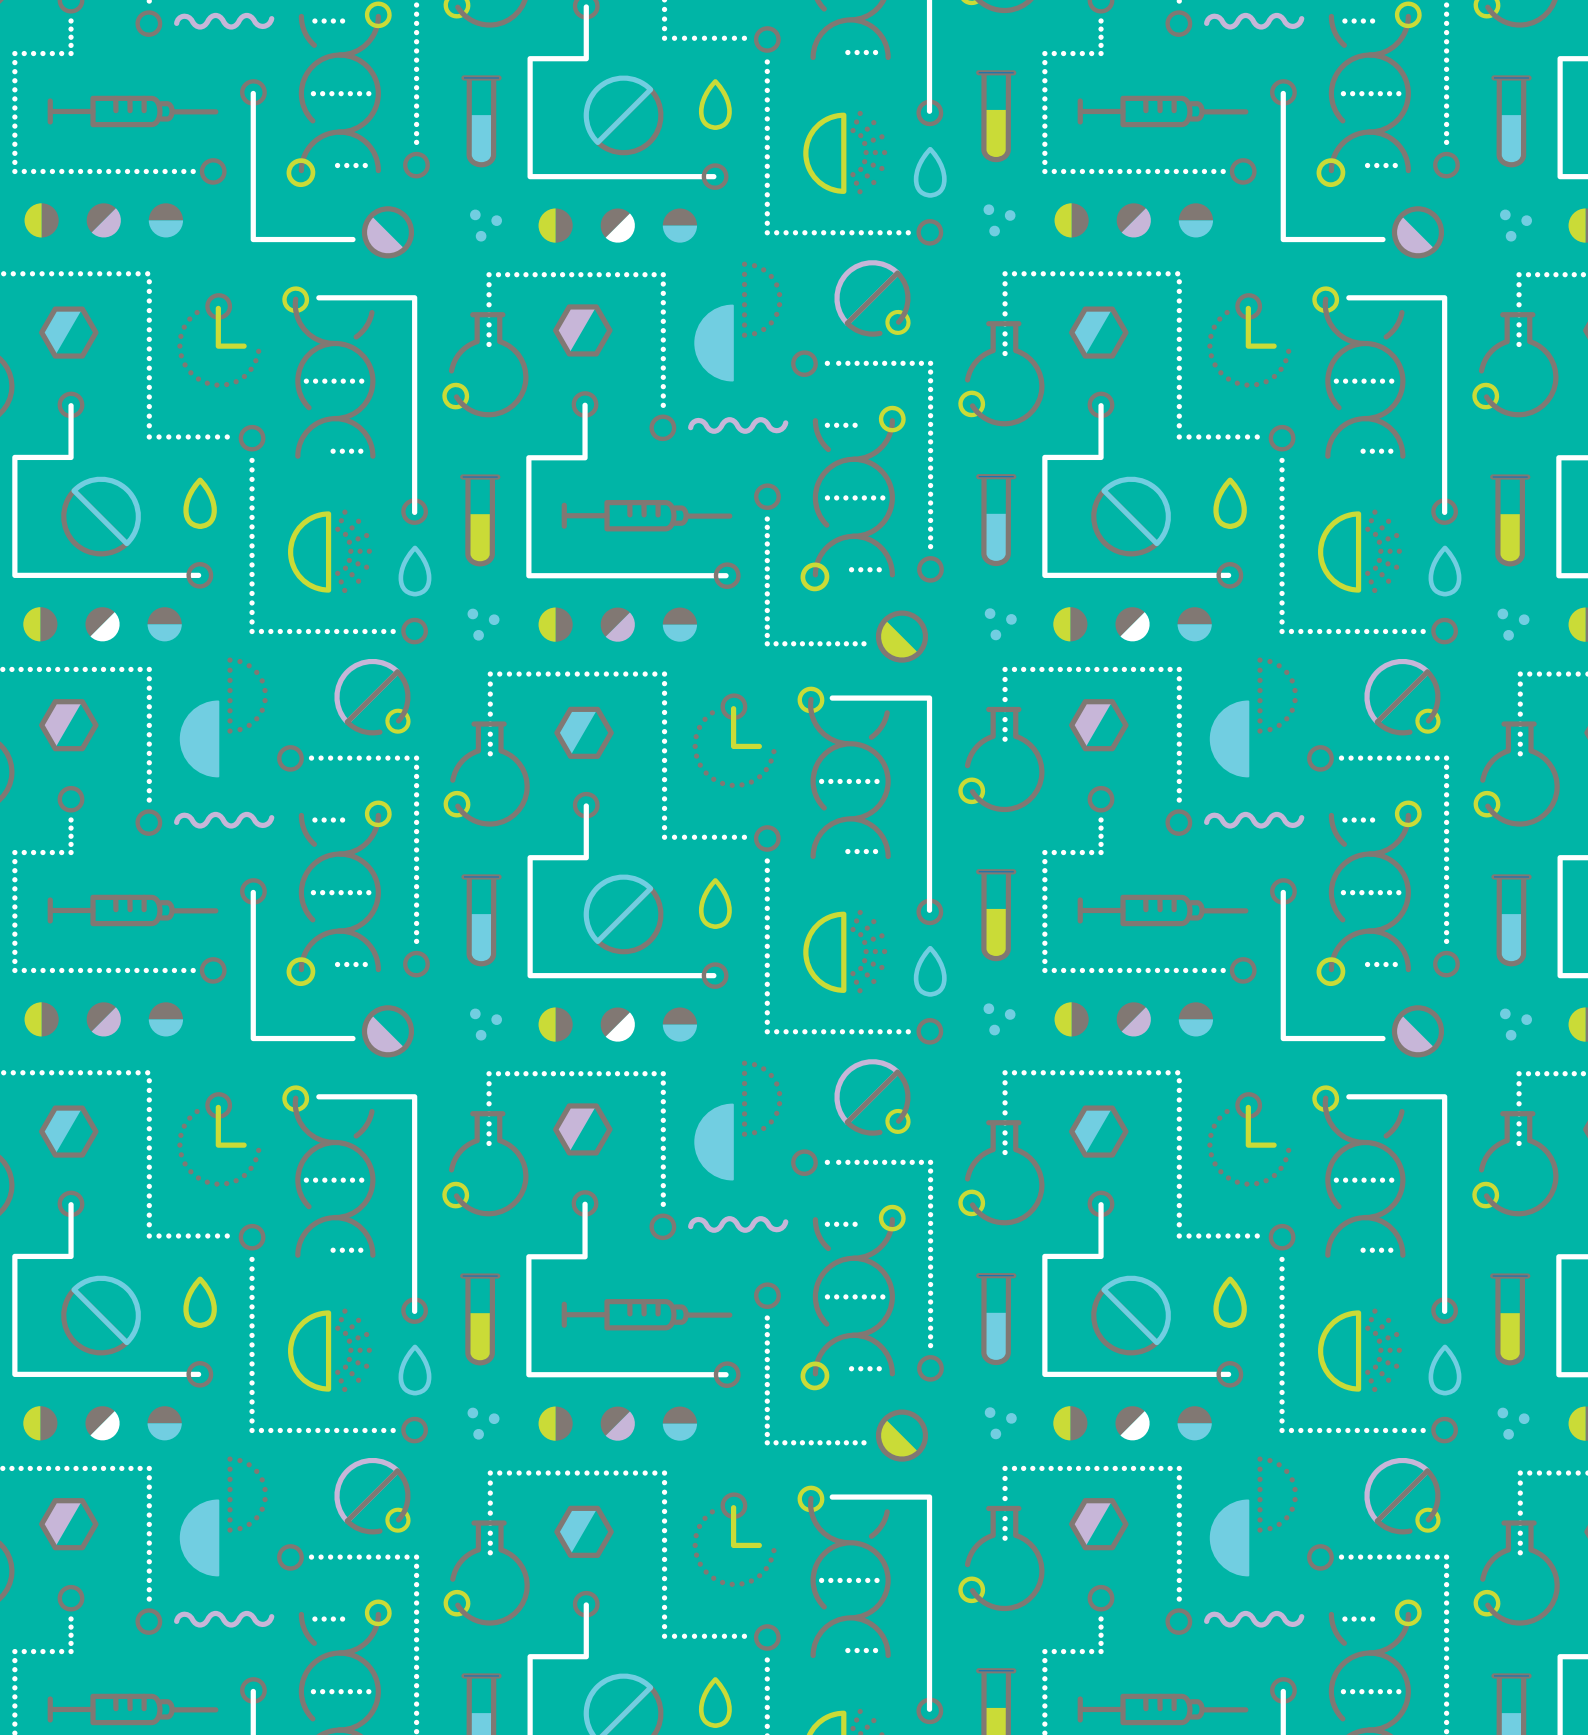

These film coating systems consist of pre-blended, ready-to-use powders that are easily dispersed in water and applied to immediate-release dosage forms where aesthetics are the primary need.

Film coatings for immediate-release tablet-coating applications are typically comprised of a polymer, such as hypromellose (HPMC) or hydroxypropylcellulose (HPC); a plasticizer, and optionally a pigment/opacifier.

We take great care in formulating all film coatings in our portfolio. The selection of ingredients and levels of use are critical factors in obtaining the target appearance and performance on the tablet core and in minimizing processing problems. Optimizing a film coating formulation requires careful balancing of specific film properties, such as strength, adhesion, flexibility and opacity.

The Aquarius™ Prime film coating systems can also be matched to existing cellulosic film coatings and are also available as clear and white base formulations.
